CENTRALIZED SYSTEM HEALTH MONITORING

MONITOR THE HEALTH OF YOUR CLOUD-CONNECTED AVIGILON CONTROL CENTER (ACC) SITES TO PRIORITIZE SITE MAINTENANCE ACTIVITIES

The Avigilon System Health Monitoring service is offered through the Avigilon Cloud Services platform for all ACC™ sites connected to the cloud. Administrators can remotely monitor the health of one or more sites using the web client, making it easy to understand the operational state of your security deployment from wherever you are, and at any time of the day. Multi-facility organizations can save time and effort by conveniently monitoring the health of distributed sites from a central location.

Our System Health Monitoring service provides an at-a-glance dashboard interface summarizing the health status by site, server and camera allowing you to quickly establish which devices are connected or failed. Without requiring you to connect to each site individually, the dashboard enables you to review the status of any of your cloud-connected sites and its individual components by using smart filters to drill down to access the detail you need.

REAL-TIME AWARENESS
Confirm the operational status of your deployment to optimize uptime across all system components from anywhere, anytime.
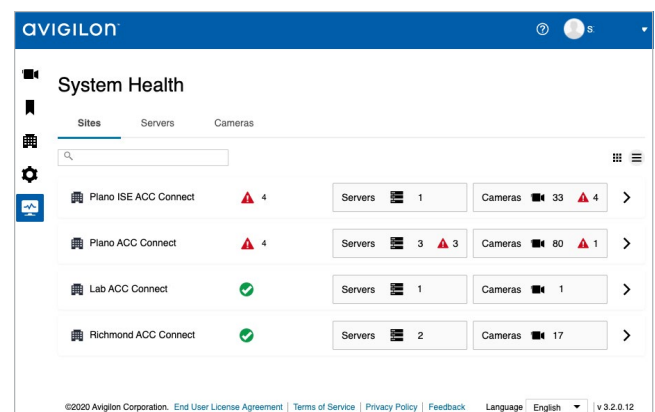

HEALTH DASHBOARD
Review a single health dashboard that rolls up the active status of all recorders and connected cameras.

TOOLS FOR EVERYDAY OPERATION
Access configuration details of recorders and cameras across all cloud-connected ACC sites. Easily audit firmware versions and contrast and compare configuration settings. Review compliance with recording retention policies and identify outliers that require attention.
